

## Enclosure Assembly

### Examples of Enclosures

Custom enclosures are produced using panels and housing/side profiles. To help give you a better idea of how these custom enclosures are designed, a few examples are provided below. Each example has a downloadable ZIP file containing all files used to create the enclosure in Front Panel Designer. The templates are examples, designed to show you how to set up your design. Adjust the settings according to your specific needs.

More information about enclosure design and available fasteners are provided in our [Enclosure Manual](#).

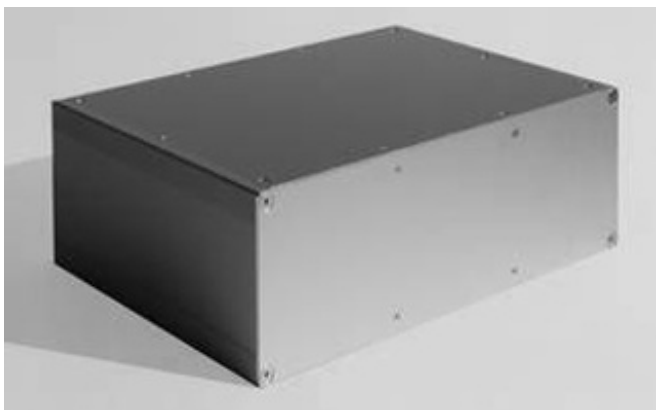

Type: Side Profile 1 (height 42 mm)
