4.4 says **-\$0.99 for Shipping!**

:shock: That GREAT! ship 10 panels 4.7kg.

UPS next day air service for **-\$1**

4.4 is not ready for prime time :wink:

Another install error

Trying to install the new FPD 4.4.0 but im getting an error:

"Two packages provide the same file"

This is on fedora 20 64 bit.

Install error on Fedora 20

Hi There!

I'm getting a package conflict error on Fedora 20.

I'm on a amd 64 bit platform.

I downloaded the 64 bit rpm version.

But yum gives this error:

```
install of frontdesign-4.3.1-2.x86_64 conflicts with file from package filesystem-3.2-19.fc20.x86_64
```

Please could I get a little help?

Adding text in other languages

Hi,

I would like to add text to a panel in Greek. The program doesn't seem to have any fonts that will allow me to do this. Suggestions?

Tom

Category Tree is Corrupt

System: Mac OS Mavericks

FrontDesign 4.3.1

I am having a problem with Front Design 4.3.1 on OSX mavericks. The Category Tree was corrupted when I was trying to make a macro from within FrontDesign.

Now I am unable to get past the startup screen; Front Design shows a "Category Tree is corrupt" dialog. While there is an Okay button that is illuminated, the splash screen is frozen in front of it.

I have tried uninstalling by deleting the package contents and restart several times. And then installing 4.3.1 dmg. Unfortunately the condition is always the same.

Perhaps this means that I am missing a file in my simple uninstall approach.

I would appreciate some advice on how to delete all files associated with FrontDesign. So that I can do a clean install.
