[Linux Software - Ordering](#)

Hello,

I am using the Linux software. It's great and I am very thankful that you are supporting Linux, however when I select "Start Ordering Program", nothing happens. Is there something I'm missing? I sure hope there is another option to complete my order.

[Print Panel on reverse side](#)

It would be so nice to print the panel with a "reverse side" view. So you are looking at it as if you flipped the panel over and are working on the under side of it. This would be such a huge help !!

I constantly have to print out a panel then trace all the lines flip the paper over and re-trace all the lines so I can look at the panel from the other side. It takes me so much time to do this and I loose accuracy doing it.

That's the one and only wish I have but would really love to have this option.

Thanks

Enclosure ordering

Hi,

I cannot seem to find, on the order page, where to enter details for Enclosure ordering, thanks.

saving own macro

I just created my own macro folder.

I go to the object, in this case a hole, right click on it and then click on create macro.

The new window opens, I go to select my new macro folder, hit return and nothing happens. No matter what I try, it will not allow me to select my macro folder.

I am using a MAC with the latest OS.

Indexing switch positions

Im trying to create a front panel that has a hole in it 41mm in diameter for a switch to protrude through.

Im having trouble positioning the location dots for the switch which indexes 36 degrees each time.

Any sugestions on how to deal with it

thanks
