I would also appreciate this very much.

Being able to export 3D files would allow us to virtually test the fit of your boxes into much larger systems. Currently we take the 2D files and manually create rough approximations in our 3D CAD software (Solidworks). An easy way to export exact 3D models would make the solutions you offer much more attractive for our applications.

I too use Solidworks and would like this ability. But for now I do it the other way- build in Solidworks, create a dimensioned drawing, then rebuild in Front Panel.

This has given me another thing I'd like from your product. A Drawing. Documentation is vital, and so far I haven't found another way.
