Object/group rotation

When rotating a group (or inserted macro object) the rotation factor is kept during the current session, but when the file is saved, closed, and then reopened the rotation factor of that group is reset to 0.0 (ie, the rotation is not saved in the data file). Would it be possible to have the rotation saved as part of the data file, so when the file is reopened the rotation value of objects is preserved?

Hello,

You are right, the rotation angle in the properties of the group is not saved

However, the elements of the group are rotated correctly and the outcome of the FPD file is not changed. You see this when you ungroup the elements, they still have the modified angle.

We are currently looking for a solution to improve 'Group Objects' in the next version. Thank you for pointing that out.

Best regards,
Diane
