#### Beveled Oval Slot

I wish to make an oval shaped slot that has beveled edges. how can i do that?

So for example I want a .5" wide by 2" long oval slot with a 45 degree bevel on the inside edge. (not actual dimensions just for example)

Hello Dave,

Thank you for contacting us with your question.

I sent you an e-mail today with the desired object. Essentially, I created the oval in a 3rd party

CAD program, then imported it as a free contour.

The beveling is done by special request. Notes for this can be left in the Remarks for Production in the front panel properties, or in the Shipping and Other tab in the ordering program.

Do not hesitate to let us know if you have additional questions.

Kindest Regards,

Paul Birkeland
