conductive finish

Do you offer an electrically conductive finish?

Regards,

Dave

Hello Dave,

Thank you for contacting us with your inquiry.

We do offer a material that is anodized on the front surface and chromated on the back. This selection is available in the Materials drop down menu in our software.

Feel free to let us know if we can be of any additional assistance.

Kindest Regards,

Paul Birkeland

Hello Paul,

Thanks for pointing that out to me. The chromated back will work well since it mates with the conductive coating on the connectors that I am using. However, I would really prefer a black anodized front surface that would match the rest of the black enclosure. Is there any chance of getting a black version of the chromated panel?

Thanks,

Dave Davenport

Hello again Dave,

While we do not have any plans to offer the anodized/chromated material with a black anodized finish, we have successfully powder coated just the front side of several anodized/chromated panels black.

This service is available upon request, and it would meet the needs of having both a conductive finish on the rear and a black surface on the front, as well as adding the bonus that the edges of the panel are also coated black.

If we can provide any additional assistance, please do not hesitate to let us know.

Kindest Regards,

Paul

Hello again Paul,

I think that powder coating the panel will work for me. I will get into the details of how to get the lettering on the powder coat when the time comes.

Thanks again, you have been a great help,

Dave
