

Customer-supplied material

We can work with almost any non-ferrous material you provide. Not only are we able to work with powder coated or painted off-the-shelf panels, but we can also machine enclosure parts.

Besides aluminum, our machines can also process most non-ferrous metals and plastics. Check [here](#) for a list of material options.

Please [contact us](#) if you cannot classify your supplied material or find it in our list of material options. We would be happy to check on the machinability for you .

Please check the box "Use customer provided material" in the "Front panel properties" dialog box in Front Panel Designer when providing your own material.

Find more information about Front Panel Designer and supplying material in our [online help](#).
