### Printing on Perspex

Can you UV print on Perspex? Is it durable enough to handle regular finger touch action over a long period, or would it need to be printed in reverse on the back side? Can Perspex be printed on both sides? Is the printing cost affected by number of colors?

### Cleaning Digitally Printed Front Panel

Hello,

We just received our front panel in the mail and the quality of the machining and digital printing is absolutely perfect. We're in the process of developing general cleaning instructions for our system and we are wondering if it is ok to quickly wipe the anodized/printed aluminum surface clean with a 70% Isopropyl Alcohol solution? I believe the anodizing would be fine, so I am more concerned about whether or not the printing could hold up to the alcohol. If not, can you please provide other cleaning suggestions?

Thank you,

Jim Neumann

### Holes in the corners equidistant from the edges.

Is there a way to put holes in the corners equidistant from the edges?

### On/Off Symbol (macro?)

Does anyone have a universal on/off symbol they can share? I'm referring to the symbol that looks like a semi-circle with the gap at the top and a short vertical line bisecting that gap. I imagine the symbol would be maintained as a macro, but if anyone has it in any form suitable for use with FPD I'd certainly be grateful.

Regards,  
Scott

### Mounting Flange spacing and sizing

is there a feature where Standard rack sides cutouts sizing and dimension on the panel can be applied in your software ? ( Look at the uploaded file for more clarification.

### Manufacturing Process

Hello there,  
My current stage: 19" 2U panel, Aluminum Powder-Coated( Jet Black) with a number of holes.  
The question is : do you make the holes first before coating the panel or is it the opposite? in other words do I have to make larger holes to account for the coatings?
