[cavities](#)

If I place a large cavity on the front side and a smaller cavity inside it on the back side, the back side cavity is not visible on the drawing.

Also, the instructions to globally change to inch units do not seem to work

[Keyboard Not Functioning Correctly](#)

Gentleones,

I cannot use "M" to set coordinates manually, I cannot use "1"-"4" to select the snap mode, and I cannot use the number pad keys to set the origin.

Other keys work: "A" selects the ruler, "space" clears the tool, Shift-G makes a group, and so on.

I have tried booting in "safe boot" mode and the problem persists.

I'm using FPD v4.5.1 and OS X 10.11.5.

This problem makes the program unusable.

Thanks,
Bill

Orientation for side machining

Hello. For side machining, I assume that in the side file, the upper edge always corresponds to the front surface of the panel in the main file. Therefore, for the upper side edge of the panel, the origin in the side file would be located at the upper right corner on the bottom surface in the main panel. Is this correct? Thank you.

how to backup Frontdesign user macros

Having done several windows reloads and lost FrontDesign User Macros, I have found the macro location for backup.

navigate to:

control panel / appearance and personalization / file folder options / show hidden files and folders /

, >select< show hidden files, folders and drives

, >unselect< hide protected operating system files

and >unselect< hide extensions for known file types.

then ether navigate to:

C:\Users>yournameyournameyournameyourname< with your name or login id, specifically.

Windows Installation

each time I try to upgrade the installation fails.
