Painted panels

Are there any issues related to machining painted panels? I'd like to have panels made from painted (brown, textured) 19"-rack mount panels, which naturally I would provide.

Library request

First, thanks for the product and service. I started using it a while back in a hobby now I'm using it in business.

I would love to see the library expanded. In my current project it would be nice to have standard DIN sized cut-outs, not that rectangles are difficult to draw, but it seems like an obvious thing for the library.

It took me a while to find them but I found the D-connectors (in the macros section) that I was going to request.

First Time User Help

Hello!

I am working on a large audio project. I needed to replicate some Boss Guitar Effects Pedal enclosure holes onto a flat piece of metal. I need 3 in total. I am new to using FrontPanel so I was just wondering if someone can review my design.

I did it on a single sheet of metal to save money. Can I have them cut it into 3 pieces or should I do it myself? Here is a picture of what I am trying to replicate, very basic!

Pedal:

I just need that rectangle cutout-with the small cut up top for the LED.

And here is a screenshot of what I created:

Any problems with the way the cuts overlap, or any other suggestions?

Thanks!!!!

Switches

Hello,

I am trying to make a 4pole 5pos switch that has a 30 degree difference for each position.

I was wondering whats the best and easiest way to aling my text to the switch for each position.

Acrylic display windows

In the FAQ section of this website it says that I can add a display window to my panel by using a rectangle-in-rectangle shape. I have a 16" x 5" x 0.125" black anodized aluminum panel to which I'd like to add a tinted display window. Can you help me with the following questions please:

1. What thicknesses of acrylic do you offer?

2. What tints of acrylic are available?

3. How do I specify my choice in the Front Panel software?

Many thanks,

Carl

Vector support?

Hello.

Why can't a user cannot generate a design in a vector program, such as Illustrator or Corel Draw for the cuts and import to Front Panel Designer? Some of us have fully-designed setups already in vector, so this would save a lot of time versus having to needlessly redraw them in your software.
