Panel Help

Hello,

I am designing a large panel which is compromised of 2 panels joined together in the middle. I have the entire left half done with all the cut outs done. Some are over the edge and must match perfectly with the other half. Is it possible to mirror the entire left panel to make the right half so it matches up perfectly with left half? Hope that makes sense.

Thanks,

Rob

Vertical Holes

I need to have a thick panel made with drilled and tapped holes coming in from the side and from the top and bottom.

Also holes on the ends as well. FPD only shows holes on the front. How would I show holes on the ends?

User Manual PDF?

I am looking for the read me or user manual for this program I downloaded through the HBT site. Is a manual available and I am overlooking it or is it online somewhere? TIA for any direction you folks have.

Bob

D-SUB 9 CUTOUT

Does anyone have a cutout template for a D-SUB 9 connector. I tried using the rectangular cutout, adding 10-degree corners but it is clearly not correct. Thanks.

19" Rack Panel System Holes

I am designing a 6RU 19" rack panel. When I add the system holes, four holes appear in the four corners of the panel but I need to add more standard size rack holes on each side. Generally, a 6RU rack panel has four holes on each side and not just two. Ideas on how to add these?

Spacing Between Cutouts

Is there a recommended minimum spacing to use between rectangular/circular cut outs?

I have a few rectangle cutouts to place next to each other and want to make sure I'm not putting them too close together to avoid any problems during/after cutting.

Thanks!
