## Archive for January 2013

Hi Gary,

The additional panels, as for example the macro sidebar, are so-called "floating windows." This means that they can be one of the following states:

- visible, attached to one of the side borders of the main window (as is the case by default),
- visible but detached, "floating" around, moveable by mouse,
- invisible.

To fix your macro side bar, please try the following.

First, make sure that it is set to visible: go to the menu item "View" and check the item "Macro Objects". This should make your macro sidebar visible and usable -- it may still be floating, though.

If the macro toolbar is floating and you wish to re-attach it, you can

drag it by its title bar to one of the side borders of the main window. As soon as the side border changes color, just let go the macro toolbar window -- it will automatically snap into its original position.

Hope this helps! Please let us know if not.

Best regards,  
Fabian
