Clamp marks on sides of panel

What do I need to specify to make sure the clamp marks from the machining are removed from the sides of the panel. 4 mil and up panels seem to have deep clamp marks in them. I need to have them milled off.

Printing on customer supplied material

The 'Insert print graphic' button is grayed out if the 'Customer provided material' option is enabled, even if that material is anodized aluminium.

However, in the UV printing, Source material topic of the Online Help it states:

"UV printing can in principle be applied to any material. We only guarantee the perfect adhesion of the print on anodized aluminum however. As white is also available as a color, colored panels can also be printed. Under these conditions, it is also possible in principle to carry out UV printing on customer-supplied material."

Can you print on customer supplied anodized aluminium panels?

Does not work on Kubuntu 14.04.5 LTS

- 1) install as root (sudo dpkg -i FrontDesign-US-5.1.1-i386.deb)
- 2) start from menu Graphics ...
- 3) create new panel (only icon are active, everything in menu does not do anything)
- 4) cannot save (save opend dialog, can browse directories, enter name, but does not save anything, no error is shown, everything looks ok, but file is not saved - even * is still after the file name indicating not saved)
- 5) cannot even exit (clicking x, ctrl-q, all do nothing, have to kill from konsole)

Looks like very nice and usefull tool, but without saving is useless ...

Vector graphics programs

I would like to design a panel that has a unique shape. I don't have any previous knowledge of CAD programs that support DXF type file formats, so I have been reading up on the topic. Do you recommend some simple CAD programs to help me begin to understand the process, and will allow me to design the exterior shape of a panel. Thank you for your support.

print graphic

I am trying to add a print graphic to a panel, but the color of the graphic follows the color of the plate, which is not what I want.

I saved the file in white for a black panel, but when I insert it on the plate design, it turns black? How can I change that color, thanks.

Cutout size question

Square cutout question:

If I have a b***on that is 10x10mm.

What is the minimum cutout size I can make for it? Given that the minimum corner radius setting for a smooth square appears top be 0.5mm?
